

6-2018-4599 | New Methodology to Control Calcium Carbonate Morphology and Material State
[Benny Ofra](#), HUJI, School of Medicine - IMRIC, School of Pharmacy- Institute for Drug Research

Background

The ability to control the shape, size and crystalline state of CaCO_3 is significant for several industries including:

- Powder additives- improved flow properties (spherical shape versus irregular) of ink material, rubber filler, and tablet fillers
- Additives to polymers and plastic improve thermal properties (amorphous material versus crystals)
- Usage of spheres as template material for drug delivery layer-by-layer methods, simple template for removal.
- Possibly usage in cosmetics for color or texture improvement
- Nutrition additive- Potentially has improves bio-absorption (small amorphous nanoparticle compared to the commonly used micro crystals).
